Vision Statement 3.0:

For ArgGIS Pro users

Who need to analyze data and find many different descriptive statistics and correlations between multiple data sources.

The ArcStat plugin is a tool

That can combine multiple statistical and chart drawing functions together to give the user as much information about the data they are attempting to analyze and give useful output to power further analysis in ArcGIS or other tools

Unlike individual analysis tools in the ArcGIS built-in toolboxes

Our product provides all these statistical analysis in one place in an intuitive way that can output information to the user or to formats that can be used in other tools.
